

Please find below a link to the Australian Journal of Mining featuring the ProMet and CDE Agreement to provide small to medium sized iron ore beneficiation plants to India. To date CDE have identified about a dozen potential clients which they are following up.

ProMet's contribution to these projects will be the process design, preliminary general arrangements, electrical single line diagram, mechanical equipment list and specifications for the major mechanical equipment. Provision of this basic engineering will be followed up by audit visits to India during the detailed engineering and assistance with commissioning.

The Indian economy is second only to China in terms of annual growth and this arrangement gives ProMet the opportunity to develop a foothold in an expanding market.
