

## PROMET ENGINEERS AND CDE COLLABORATION

ProMet Engineers and CDE have signed a technical collaboration agreement. The agreement pulls together ProMet Engineers' iron ore process engineering expertise with CDE's ability to provide turnkey iron ore processing projects in India.

CDE, headquartered in Northern Ireland, has set up an Indian-based company to tap into the extraordinary market growth in India. The local company is a dynamic and modern company specialising in the design and manufacture of tailor made equipment for the mineral and aggregate washing and classification, dust washing, wastewater, the materials handling, and quarrying industries. CDE India offer innovative hi-tech plant and a service level second to none to customers throughout India. The Indian head office and regional fabrication base is in the heart of Kolkata.

The agreement will focus on iron ore beneficiation projects up to 2.4 Mtpa of product for private sector clients in India.

We believe this is a significant step forward into penetrating the Indian market for iron ore beneficiation and ensuring the continued growth of ProMet Engineers.

L to R: Jim Cribbes, Chairman of ProMet, Tony Convery, the Northern Ireland-based Chairman of the CDE Group, David Glynn, Managing Director of ProMet, and Manish Bhartia, the CDE India Managing Director.
